

PERFECT LINE

Perfect edge finish

106730

25 metres

Made of two types of foam:

- 1 Polypropylene
- 2 Polyethylene

PERFECT LINE high density foam masking tape is made of two foam types: polypropylene and polyethylene. Due to the flat design and consistent adhesive of the semi-rigid foam, it can be placed on edges quickly and easily. When **PERFECT LINE** is attached to the edge of a surface it keeps paint from going into joints, and it creates a 90 degree paint edge almost imperceptible to the eye.

PERFECT LINE leaves no glue residue behind like other competitive products.

Simply remove the protective paper strip from the glue edge and press **PERFECT LINE** in place!

PRODUCT FEATURES

- Easy placement.
- Perfect edge finish (almost imperceptible).
- Protective paper on glue edge.
- 25 m long roll (82.02ft.).

STORAGE

Store in areas with temperatures below 35°C and normal ventilation.
