Pre Treatment

The surface should be clean, dry and free of grease. Remove loose old lacquer and rust and sand the surface. Apply a layer of MoTip primer suitable for the surface. After drying, sand the base layer (grain 600).

Treat

The surface should be clean, dry and free of grease. The aerosol should have room temperature. Best processing temperature 15 to 25°C. Before use, shake the aerosol for 2 minutes and spray a sample. Distance to the surface to be treated approximately 25 to 30 centimetre. Apply the lacquer in several thin layers. Before applying the next layer, again shake the aerosol. After use, clean the valve (turn aerosol upside down and press the nozzle for approximately 5 seconds).

The drying time depends on the ambient temperature, the humidity of the air and the thickness of the lacquer applied.

6. SHELF LIFE
