8.2. Exposure controls

Personal protective equipment

Eye protection

Safety glasses with side-shields conforming to EN166.

Hand protection

Material: Fluorinated rubber. Break through time: > 480 min. Glove thickness: >= 0.4 mm.

Directive: DIN EN 374. Protective index: Class 6.

Remarks: Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough. The data about break through time/strength of material are standard values! The exact break through time/strength of material has to be obtained from the producer of the protective glove. The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other. Preventive skin protection Butyl gloves are not suitable. Nitrile gloves are not suitable. Avoid natural rubber gloves.

Skin and body protection

Please wear suitable protective clothing, e.g. made of cotton or heat-resistant synthetic fibres. Long sleeved clothing.

Respiratory protection

Apply technical measures to comply with the occupational exposure limits.

If exposure cannot be avoided by the provision of local exhaust ventilation, suitable respiratory protective equipment should be used. Dry sanding, flame cutting and/or welding of the cured material will give rise to dust and/or hazardous fumes. Use the indicated respiratory protection if the occupational exposure limit is exceeded and/or in case of product release (dust).

Filter type: Combined particulates and organic vapour type (A-P).

Protective measures

Ensure that eye flushing systems and safety showers are located close to the working place. Avoid contact with the skin and the eyes.
Use only with adequate ventilation.
