### **Information on abrasives made of corn cob meal:**

The abrasive used in MECASTAR is obtained by grinding threshed corn cobs. The corn grains have already been removed so that there is no competition with food. The corn cobs are cultivated in Europe. Goods from countries outside the EU are only used in the event of supply bottlenecks.

The rubbing agent has a beige color and looks similar to the previously used polyurethane rubbing agent. It produces a good abrasive effect and leaves a pleasant feeling on the skin.
